Fictional demo data

Junior Software Developer - Example Tech Inc., Toronto, ON (Hybrid)
Example Tech builds internal tools for small logistics teams.

What you will do:
- Build and maintain full-stack features in React and TypeScript on the front end and Python on the back end.
- Write SQL queries and work with PostgreSQL databases.
- Ship code with Docker and Kubernetes, running on AWS.
- Set up CI/CD pipelines and write unit tests with Jest.
- Work with product managers and support staff to fix bugs and ship improvements.

What we are looking for:
- Bachelor’s degree in Computer Science or a related field, graduating in 2027.
- Experience with Python, JavaScript, TypeScript, React, and SQL.
- Experience with PostgreSQL, Git, Docker, Kubernetes, and AWS.
- Familiarity with CI/CD pipelines and unit testing with Jest.
- Strong communication skills and an interest in learning new tools.
